

General Information:

Name:	Sergeii T., Middle Frontend developer, 7+ years commercial exp
Date of birth:	February 27, 1993 (31 years)
Summary:	<p>Position: Middle Frontend developer</p> <p>Experienced Fullstack developer (React, React Native, Flutter, Node.js) with 7+ years of expertise in developing complex cross-platform applications. Proficient in delivering applications that meet specifications and provide exceptional user experiences. Skilled in leveraging the capabilities of React and React Native to build robust, scalable, and visually appealing applications.</p>

Technical skills:

Operating Systems:	Linux, Windows, MacOS, IOS, Android
DBMS:	SQLite, MongoDB, Postgresql
Version control:	Git
Languages:	Javascript, Dart, Python, Typescript
Tools, IDEs, Services:	Visual Studio Code, Android Studio, XCode

API, libraries, frameworks and technologies:	<p>React (React Native): redux, recoil, MUI, socket.io</p> <p>Futter: provider, dio, Rive</p> <p>Firebase for web & mobile</p> <p>Node Js: meteor, express, Prisma, socket.io, redis</p> <p>Confluence, Jira, Trello; Scrum</p> <p>macOS, Linux, Windows;</p>
---	---

Professional experience:

June, 2023 - October, 2023	<p>Description:</p> <p>A virtual reality application for bringing business cards, billboards and other printed materials to life. The main emphasis is on the development and visualization of scenes created through the admin panel.</p> <p>Technologies:</p> <p>React native, viro, redux toolkit</p> <p>Position:</p> <p>Software engineer, specialization: react native developer</p>
April, 2022 - June, 2023	<p>Description:</p> <p>Application for cutting, moving and adding text, image or sound to video. I built a prototype (on python) for editing video and developing editors on mobile. We have an option to add video background, image and sound.</p> <p>Technologies:</p> <p>React native, ffmpeg, reanimated, python (BE), React</p> <p>Position:</p> <p>Software engineer, specialization: react native developer</p>
February, 2021 - January, 2022	<p>Description:</p> <p>Application with statistics of usage (mb, min, sms). I work as a mobile developer and build all the ui interface, for real time update and OTP auth I used firebase (firestore).</p>

	<p>Technologies: Scrum, Dart, Flutter, Firebase, REST Api</p> <p>Position: Software engineer, specialization: flutter developer</p>
<p>August, 2020 - February, 2021</p>	<p>Description: E-commerce platform, delivery foot. I work as a mobile and web developer. I work on two platforms, admin panel for delivery service and develop mobile apps for a delivery driver. I use websocket (socket.io) to send data between apps in real time. Also, I use firebase notification like a second data channel. The main feature was offline mode and caching information about delivery paths on map.</p> <p>Technologies: React, NextJs, Flutter, firebase</p> <p>Position: Software engineer, specialization: flutter developer, web developer</p>
<p>March, 2020 – August, 2021</p>	<p>Description: Chrome plugin for control contact in social network (linked). Develop chrome extension with backend on express (and mongodb). I work on a ui that integrates into the linkedin interface and develops automatically sending messages and contact. The main problem was saving the process send contact if the user reloads the page, for this I used indexeddb in background mode.</p> <p>Technologies: Scrum, TS, mongodb, express js, chrome extension, angular, jQuery</p> <p>Position: Software engineer, specialization: web/backend developer</p>
<p>Autumn 2021</p>	<p>Description: E-Commerce project, shop. Little shop with payment via 2checkout. I was a single developer and built a full</p>

	<p>architecture project. On the FE path I used angular with SSR and on BE meteor. For connection between both technologies I used meteor-rxjs library.</p> <p>Technologies: Meteor, Rest API, Angular</p> <p>Position: Software engineer, specialization:web/backend developer</p>
<p>Summer, 2021</p>	<p>Description: Crypto trading plugin. Migrated platform from express to meteor and using subscribers as a main way data transfer between client and user. Main platform ideas show a few crypto trends on one graphics (from different sources). The platform includes: auth, payment system and getting data from different platforms (like benance) to DB - client just subscribe on it.</p> <p>Technologies: Meteor, Rest API, React</p> <p>Position: Software engineer, specialization:web/backend developer</p>
<p>February, 2019 - January, 2020</p>	<p>Description: Real Time system monitoring gas stations. Simple admin panel with reading and storing data in mongodb. Platform has two API, the first api every five minutes requesting data from hardware and socket.io for showing metrics and graphics on the dashboard. I was one developer</p> <p>Technologies: Node.js, GraphQL, Socket.io, React, python, docker</p> <p>Position: Software engineer, specialization:web/backend developer</p>
<p>August, 2019 - February, 2019</p>	<p>Description: Medical platform for connecting patient and doctor. The main idea is to create a service - "fast medical consultation". I work as a backend developer (meteor). I worked on all subscriptions and methods. We have a chat on platform and real time update scheduling.</p>

	<p>Technologies: Meteor, Rest API, React</p> <p>Position: Software engineer, specialization:web/backend developer</p>
